

I think that the data I have is good enough to make a reliable analysis for this project, the data is been properly cleaned and it has Sales Data in every region from year 1980 to 2020. For this project I have first of all filtered and excluded all the years apart from 2011-2016, as this would be more relevant to the request in the exercise.

I also have filtered and grouped data by genre, markets, platforms; I have created percentages to give more clarity on proportions between markets related to the global market.

Bar charts, pie charts and line charts were effective ways to visualize the data to give executive a clear and impactful quick look, and see the data for what it needs to show, in order to solve the questions that have been made.

I was considering also the use of a scatterplot trying to find positive or negative correlations between some data, in order to give more insights; this is been unsuccessful as I think for the way this data is structured and what the task request; a scatterplot in this case wouldn't be that much useful but it could instead be more confusing and diverge the audience from the final useful findings to be displayed.

**CHARTS CREATED**

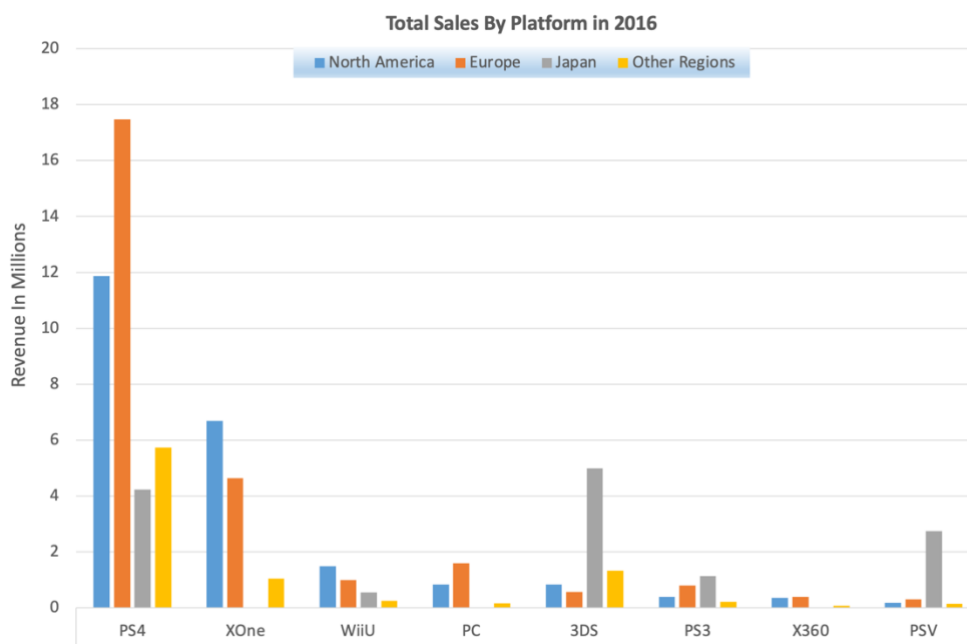

This chart looks appropriate to me for showing the proportion of sales in all markets, so is the one I will be using.

## Total Revenue In Millions

| Year | North America | Europe | Japan | Other Regions |
|------|---------------|--------|-------|---------------|
| 2016 | 22,66         | 26,76  | 13,66 | 7,81          |

## Proportion of Regional Sales

| Year | North America % | Europe % | Japan % | Other Regions % |
|------|-----------------|----------|---------|-----------------|
| 2016 | 32%             | 38%      | 19%     | 11%             |

The 1<sup>st</sup> total sales figures and percentage will give a clear understanding of the Regional Markets data totals.

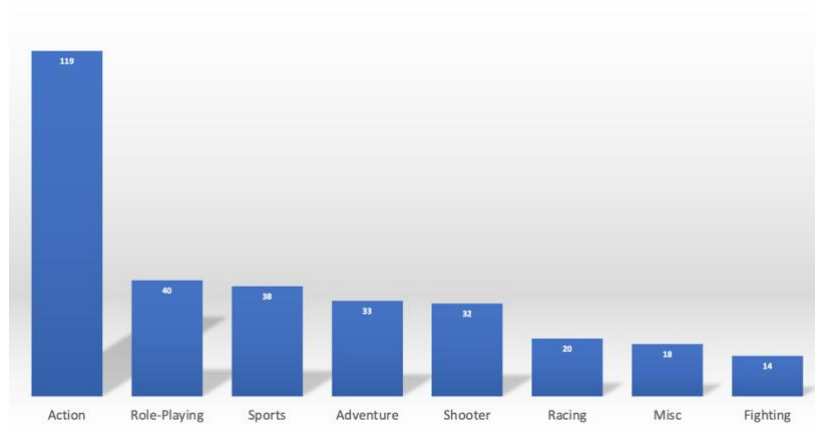

The 2<sup>nd</sup> column charts is useful to understand which platforms have the most sales.

| Genres Sales Insights Year 2016 |                |                      |                           |
|---------------------------------|----------------|----------------------|---------------------------|
| Genres                          | Global Revenue | Total Titles Release | Average Revenue Per Title |
| 2016                            | 70,89          | 343                  | 0,21                      |
| Shooter                         | 18,22          | 32                   | 0,57                      |
| Sports                          | 14,60          | 38                   | 0,38                      |
| Fighting                        | 3,86           | 14                   | 0,28                      |
| Platform                        | 2,07           | 10                   | 0,21                      |
| Role-Playing                    | 6,76           | 40                   | 0,17                      |
| Action                          | 19,91          | 119                  | 0,17                      |
| Racing                          | 1,64           | 20                   | 0,08                      |
| Misc                            | 1,17           | 18                   | 0,07                      |
| Adventure                       | 1,77           | 33                   | 0,05                      |
| Strategy                        | 0,50           | 10                   | 0,05                      |
| Simulation                      | 0,39           | 9                    | 0,04                      |
| Grand Total                     | 70,89          | 343                  | 0,21                      |

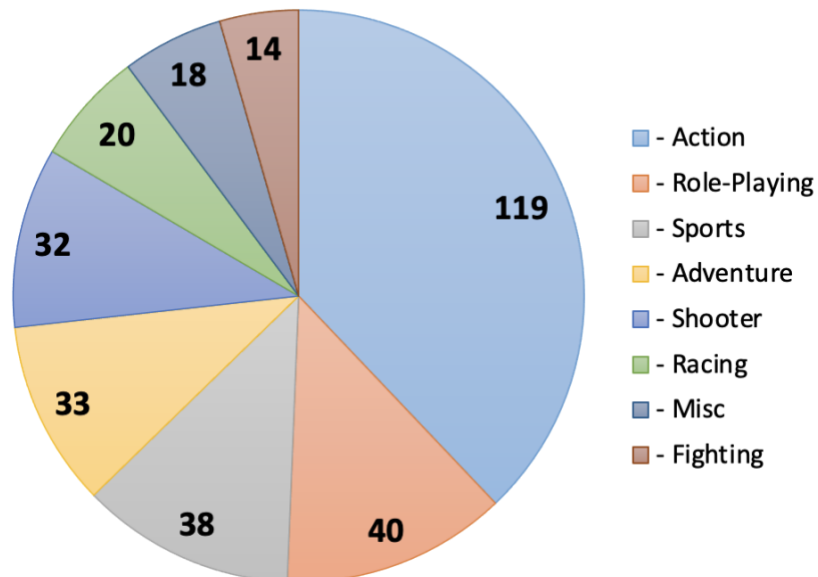

*\* Sales Figures are displayed in USD Millions.*

This is a useful table as it will clearly shows which genres have a higher revenue compared to the titles that were released; an additional good information on how to approach marketing spending towards different videogames genres.

Number Of Titles Released In 2016 By Genre

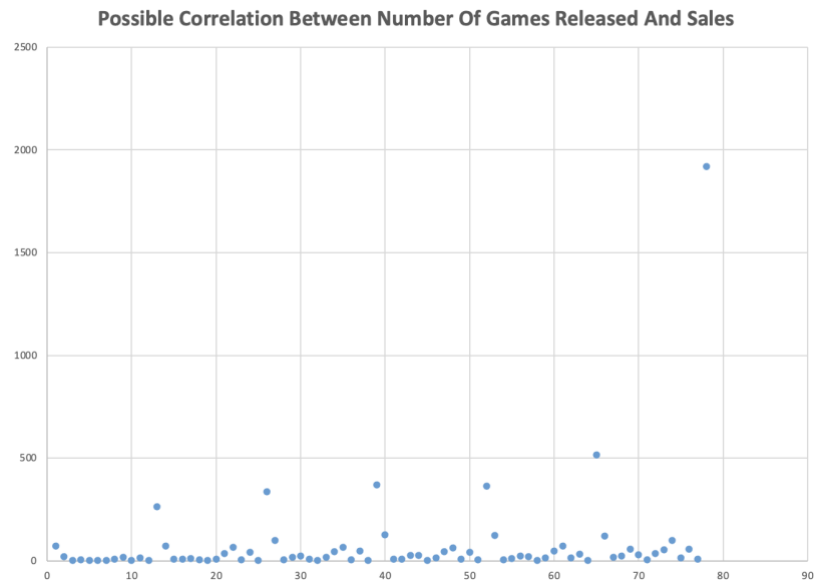

Total Videogames Released by Genre in 2016

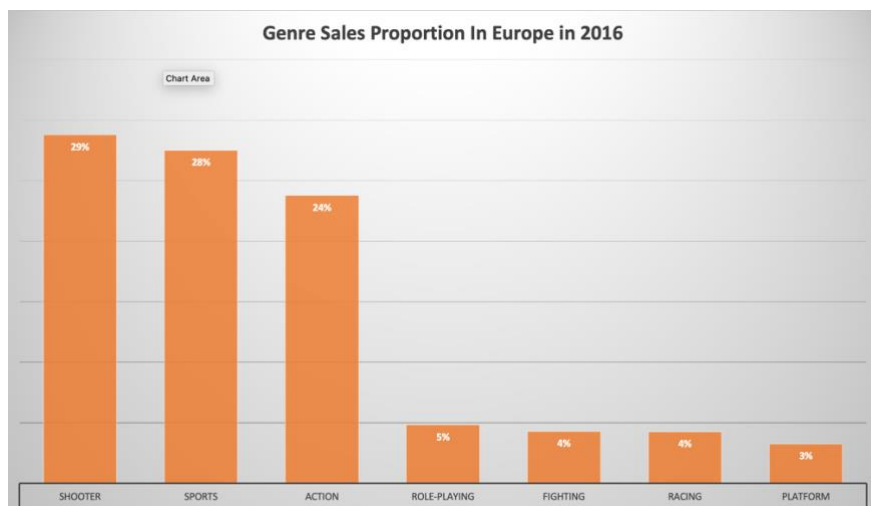

This two charts were my options for showing the number of titles by genre in year 2016, I have opted for the 2<sup>nd</sup> (pie chart) because it can better fit the format in the presentation.

## Eliminated Charts

I have tried to find a correlation between sales and releases during the years, but I wasn't able to find anything that could show a possible correlation; therefore I have decided to not include this scatterplot in the final presentation.

This column charts was used previously in order to show genre sales proportions in regional markets, but I have decided to substitute with the following clearer style in order to give a better visualization impact

### GENRE SALES PROPORTION IN EUROPE IN 2016
